

Silage Cover

METALLOCENE SILAGE FILM

A cost-effective and eco-friendly approach to silage covering

Very strong 5mil-6mil films made of Metallocene, the strongest type of polyethylene. They are available in different colour combinations such as black/white, black/green, white/green at widths of up to 120'

They offer outstanding protection from UV and mechanical damages, thus guaranteeing the integrity and air-tightness of the silo. Also, they are lighter and easier to install than standard silage films.

- ▶ Stronger structure
- ▶ Available at very large widths, up to 120'
- ▶ Different colours combination
- ▶ Easier installation

COMBI SILO

The key to excellent single-move silage covering

Thanks to the Combi technology, i.e. the introduction of 2 films in 1 roll, Combi Silo is a super strong 6.6 mil metallocene silage film and a very flexible PE underlay in one roll.

- ▶ Easier, faster and safer installation
- ▶ Additional safety relative to the use of a single silage film
- ▶ Safely packed with PE film + non-woven cover for additional protection
- ▶ Available at very large widths, up to 65' ▶ Easier transportation and storage

Brand	Width (ft)	Length (ft)	Thickness (mil)	Colour
AVAILABLE SIZES				
Metallocene Silage Film	Up to 120'	1000'	5-6	Black/White – Black/Green – White/Green
Combi Silo	Up to 65'	1000'	6.6	Black/White
